

Overlapping GO Biological Processes

Pathways shown pass adjusted $P \leq 0.05$

$-\log_{10}$ adjusted P

Gene set size

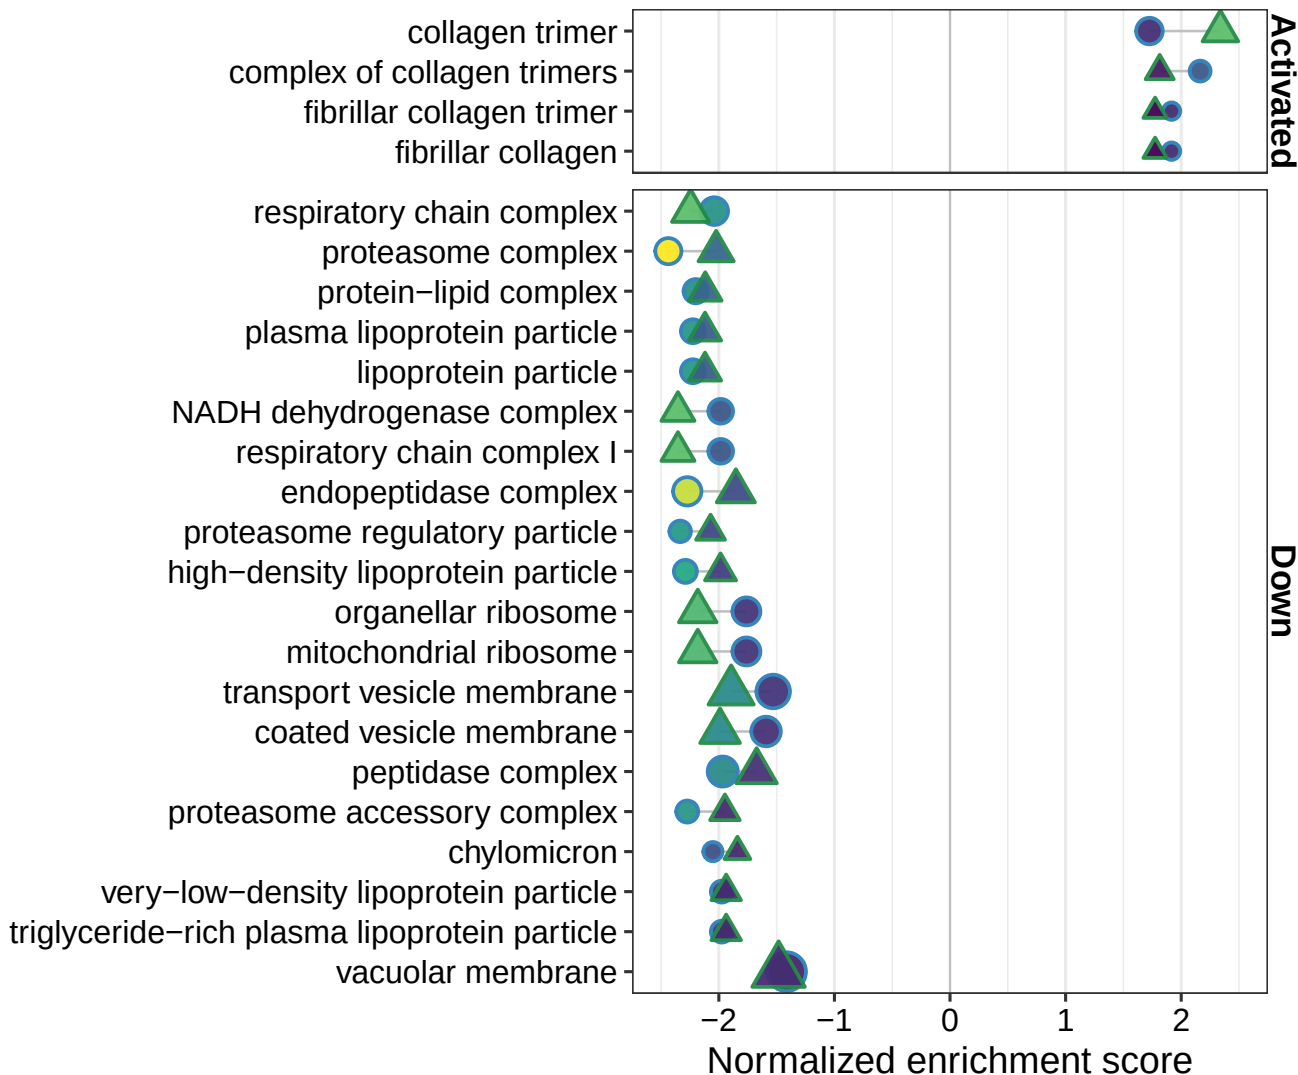

Normalized enrichment score

Overlapping GO Cellular Component pathways

Pathways shown pass adjusted $P \leq 0.1$ in both conditions

$-\log_{10}$ adjusted P

Gene set size

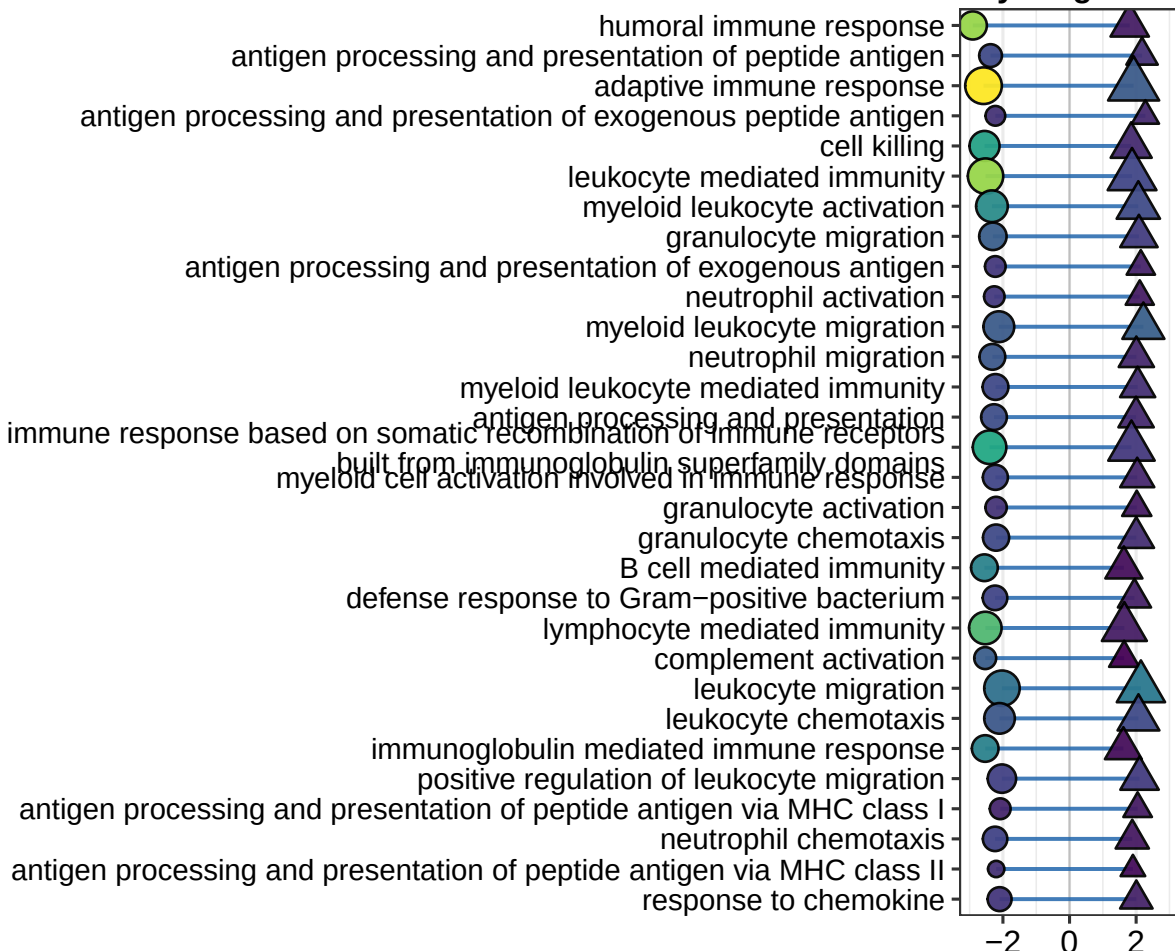

Changed significantly

Both contrasts adjusted

$-\log_{10}$ adjusted p

d: young-down

Normalized enrichment

Changed significant GO Cellular Component

Both contrasts adjusted $P \leq 0.1$; shown if NES significant

$-\log_{10}$ adjusted P

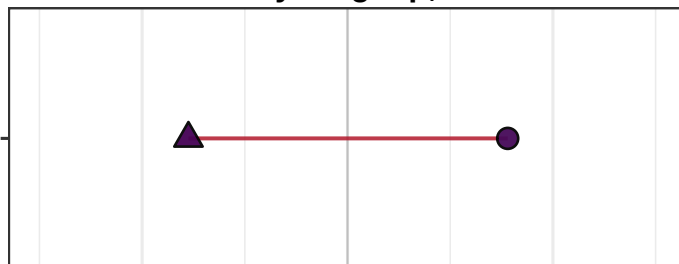

Gene set size

Switched: young-up, ID-down

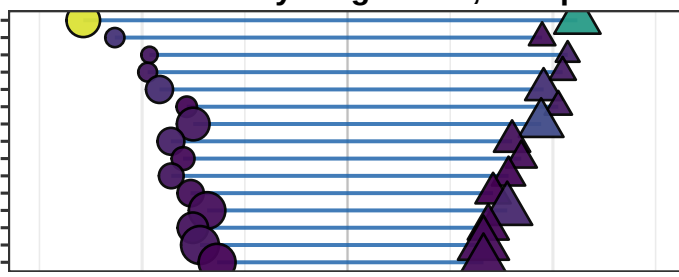

sarcoplasmic reticulum membrane

Switched: young-down, ID-up

external side of plasma membrane

other organism part
symbiont cell surface
MHC protein complex
plasma membrane signaling receptor complex
integrin complex
receptor complex
phagocytic vesicle
phagocytic vesicle membrane
cortical actin cytoskeleton
cortical cytoskeleton
plasma membrane protein complex
endocytic vesicle
actin cytoskeleton
cell-cell junction

Same direction, weaker in old ID

ribosome

ribosomal subunit
